

Increase Lending Staff Capacity

Providing capital to SMBs has traditionally meant stretching lending resources thin. But with Axis, lending teams can multiply the effectiveness of resources, supercharge loan volume, and accelerate the delivery of capital to SMBs.

So Many Opportunities So Few Resources

Financial institutions (FI) must be able to capitalize on revenue opportunities as they present themselves, but are constrained by finite resources and the need to allocate lending staff to their most profitable programs. With underwriting costs virtually equal between a \$25,000 loan and a \$250,000 loan, FIs reasonably choose larger loans that yield higher margins. With revenue increasingly more critical to the survival of FIs, how can they expand the capacity of these teams to drive higher loan volume, without wearing staff members thin?

How Axis Multiplies Lending Staff Capacity

Axis is a dynamic autonomous lending solution that combines business logic with machine learning to self-manage lending operations so lending teams can do more with limited headcount.

Streamlines Processes To Optimize Margins

Our solution simplifies and speeds up the application process, manages KYC/KYB, and reviews them for compliance throughout.

Autonomously Manages Lending Operations

Axis self-manages lending operations—from pre-qualifying borrowers to underwriting and closing. It intelligently achieves this in real time with minimal human oversight required.

Minimizes Resource Demand On Support Teams, Risk, And Compliance Teams

Axis automatically applies the financial institution's risk policies to drive compliance and minimize potential for loan defaults.

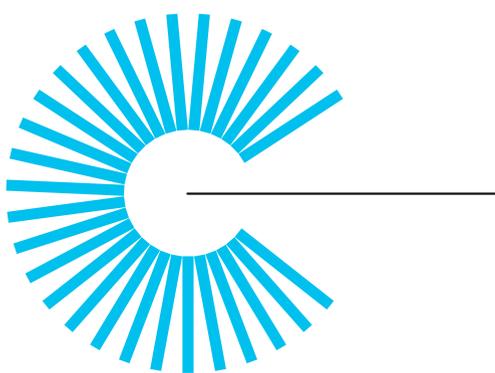

Reduces Lending Downtime From Version Updates Or Bug Fixes

Axis is a SaaS solution that provides regular enhancements and timely bug fixes to drive minimal interruptions to business operations. This minimizes lending downtime and keeps the staff productive.

Through automation of processes, could save banks up to \$70 billion by 2025.

Forthcoming Capabilities

In the near future, Axis will apply data science to intelligently calculate applicant risk scores. It will employ machine learning to analyze loan performance across millions of data points gathered over multiple years, from an ever-growing population of borrowers. It will then dynamically apply these learned insights to determine risk scores and optimize pricing for each borrower. This SaaS solution will also autonomously generate closing documents and administer the signing and boarding processes to further free up team resources and increase the speed at which borrowers receive funding.
