

Mitigate Fraud and Manage Risk

As technology transforms lending, managing risk is increasingly demanding for financial institutions. With Axis, FIs can drive compliance while maximizing financial performance and efficiency.

The High Cost of Managing Risk

Especially in the SMB-lending space, adjusting risk models to reflect changes in economic conditions and credit behaviors is expensive. To make matters worse, lending teams that try to do so manually can incur costly gaps, errors, and compliance issues. And with growth becoming increasingly important to the survival of FIs, is there a way to efficiently mitigate fraud and manage risk so they can realistically take advantage of these opportunities?

How Axis Reduces Risk Associated With SMB Lending

Axis is a dynamic autonomous lending solution the combines business logic with machine learning to help mitigate fraud and manage risk.

Provides Crucial Data And A Much Needed 360-View Of The Borrower

Axis autonomously imports pre-validated third-party data and public records of the borrower and their business. It then synthesizes this data to produce an accurate, comprehensive picture.

Analyzes And Synthesizes Large Sets Of Insights To Improve Risk Management

Applying the power of data science, Axis looks for patterns and trends in your data to improve your ability to avoid risk and detect fraud. Using rules and policies you set, it configures fine-tuned risk scoring, self-manages KYC/KYB, and reviews them for compliance and consistency.

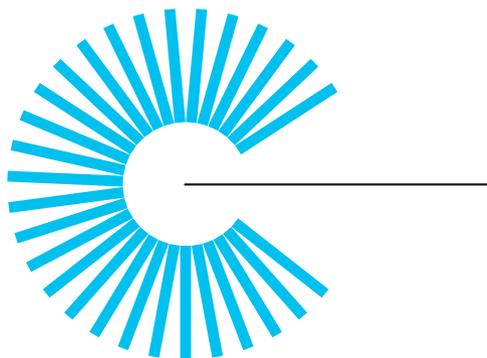

Provides Support In Navigating Regulatory Changes

Axis is backed by a team of compliance experts who stand ready to provide FIs with analysis and support as the regulatory environment evolves.

88% of surveyed lenders plan to increase their investment in artificial intelligence specifically for evaluating credit risk.

Forthcoming Capabilities

In the near future, Axis will apply data science to intelligently calculate applicant risk scores. It will employ machine learning to analyze loan performance across millions of data points gathered over multiple years from an ever-growing population of borrowers. It will then dynamically apply these learned insights to determine risk scores and optimize pricing for each borrower. This SaaS solution will also autonomously generate closing documents and administer the signing and boarding processes to further free up team resources and increase the speed at which borrowers receive funding.

Discover how Axis can increase your lending staff capacity.
